

YUNEX Technical Bulletin STAB22-0131

ST950 Firmware Release 46059 Issue27

YUNEX
TRAFFIC

Introduction

The ST950 Firmware 667/TZ/46059/000 has been updated to Issue27 and is available to download from [YUNEX Traffic Technical Downloads](#)

This Issue 27 release includes the following changes:

- Fix continuous SDE/SA extensions on LV/ELV

For the complete list of changes, refer to the ST950 Compatibility Handbook (667/SU/46000/000 Issue22 or later)

Priority of Change: *For Information Only*

Scope

ST950 Firmware upgrades

Upgrading from v23 (or later) to v27 only requires the user to press the Level-3 pushbutton and during the upgrade the Traffic Signals will enter Reserve State, which in most cases means they remain illuminated and cycle in Fixed Time.

Upgrading from an earlier version will require the user to switch off the signals and press the Program button, and the signals will remain off until the upgrade is complete, which could take 20 minutes or more.

Note: Upgrading from v23 (or later) will upgrade the EFC while the signals remain in Reserve State because the program, button no longer needs to be pressed to initiate the EFC upgrade. If the primary CPU Firmware also needs to be upgraded, this step is performed later, reducing the time the signals need to be switched off to 2-3 minutes (rather than 20+ minutes).

Procedure

ST950 Firmware:

To upgrade the ST950 Firmware 46059 to Issue27, you will need the firmware package file ***REL_46059_27_0_6.pkg***

This is available to download from [YUNEX Traffic Technical Downloads](#)

To upgrade the ST950 Firmware 46059 please follow the instructions in the following handbook:

- 667/HQ/46000/009 - ST950/Stratos Outstation Firmware Upgrade Quick Start Guide

Once the upgrade is complete, you should use the System page to verify that it has been uploaded correctly and the Package Version is displayed as: **27.0.6**
